Index to

The Welding Journal

Volume 33—1954

Published by the American Welding Society, 33 West 39th Street, New York 18, N. Y.

(a) The Welding Journal

This part includes general technical articles, papers presented before Section and National meetings, articles for the practical welder and designer, news, biographical items, current welding literature and advertising.

Page allocation by issues

January	1– 96	July	627–732
February	97–194	August	733–828
March	195–296	September	829–930
April	297–426	October	931–1044
May	427–524	November	1045–1142
June	525–626	December	1143–1238

(b) Welding Research Supplement

This section includes the reports of the Welding Research Council, critical digests of the literature, reports of the Project Committees and research reports of industry.

Page allocation by issues

January	1-s– 64-s	July	305-s–368-s
February	65-s–112-s	August	369-s–432-s
March	113-s–160-s	September	433-s–480-s
April	161-s–208-s	October	481-s–544-s
May	209-s–256-s	November	545-s–584-s
June	257-s–304-s	December	585-s–624-s

(a) THE WELDING JOURNAL

Subject Index

Adams Lecture—Aspects of Welding Research in British Merchant Shipbuilding—R. B. Shepheard, 23–40.
Adhesive Bonding Complements Soldering and Brazing—H. H. Simons, 647–650.
Aluminum Alloys Spot Welded with Single-Phase Equipment, J. F. Harris, 1058–1072.
Aluminum Flash Welded to Copper Tubing—W. F. Haessly, 1162–1170.
Aluminum—Spot Welded with Single-Phase Equipment, J. W. Kehoe and D. R. McCutcheon, 966–986.
Aluminum—Spot Welding Thin—I. W. Johnson, 759–762.
Arc-Air Process—M. D. Stepath, 860–864.
Austenitic Manganese Steel Welding Electrodes—Howard S. Avery and Henry J. Chapin, 459–479.
Austenitic Manganese Steel Welding Electrodes—Discussion by J. A. Trainor and Robert Bramley, 944.
Automatic Arc Welding Manually Guided—R. A. Kubli, 835–841.
Automatic, Semiwelding and Hard Facing—H. S. Avery, Turner G. Brashear, H. J. Chapin and G. H. Edmonds, 1073–1079.
Automatic Twinarc—Submerged Arc Welding—Theodore Ashton, 350–355.
Automatic Welding and Hard Surfacing Fluxes—L. K. Stringham, 132–136.
Automatic Welding with Multiple Electrodes—D. E. Knight, 303–312.
Automatic Welding Processes, Procedure Control as Applied to—W. H. Simon, 1149–1161.

Backing Ring—Consumable Insert Method of Root Pass Welding—Theodore A. Risch and Alfred E. Dohna, 670–679.
Braze-Welded Furniture Beautifies the Home—E. J. Chester, 986.
Brazing Electronic Components—A. W. Swift and R. J. Metzler, 119–123.
Brazing, High Temperature Fusion of Titanium and Titanium Alloys—R. A. Long and R. R. Ruppender, 1087–1090.
Brazing—Insert-Gas-Shielded Titanium—Harlan L. Meredith, 537–542.
Brazing-Metallurgical Principles of—M. S. Burton, 1051–1057.
Brazing Silver Refractory Metals—C. H. Chatfield, 864–867.
Bridge Welding—The Reconstruction of the MacArthur Bridge—Ned L. Ashton, 313–323.
Bridges—Special Problems in Structural Welding for—Stewart Mitchell and Arthur L. Elliott, 633–642.

Carbide Segregation in $1^1/_4$Cr – $^1/_2$Mo Steel Pipe—Discussion by A. B. Wilder, 312.
Chromium-Bearing Steels—Automatic Arc Welding of—Clarence E. Jackson and Arthur E. Shrubsall, 752–758.
Control and Tolerance on Fillet Welds—John Mikulak and Merle Dillman, 449–458.
Copper-Nickel 90/10 Alloy, Welding of Discussion,—Karl M. Wergert, 1184–1185.
Copper-Nickel Alloy 90/10—Welding of—G. R. Pease and T. E. Kihlgren, 329–338.
Copper Tubing Flash Welded to Aluminum—W. F. Haessly, 1162–1170.
Cutting and Grooving—Shielded-Metal-Arc—Helmut Thielsch and Joseph Quaas, 438–446.
Cutting—The Arc-Air Process—M. D. Stepath, 860–864.

Design—New Principles for the Calculation of Welded Joints—C. G. J. Vreedenburgh, 743–751.
Distortion—Prediction of Angular Caused by One-Pass Fillet Welding—T. Kumose, T. Yoshida, T. Abbe and H. Onoue, 945–956.

Editorial Previews
Atomic Research Reactors, 1095–1096.
Automatic Welder Used in Laying Longest Aluminum Pipe Line, 566–567.
Magnesium Ramp, 380.
Mobile Arc Welders Go Directly to Jobs, 569–570.
Modern Electrode Plant—Lancaster, Pa., 147–148.
New Foster Wheeler Plant Starts Limited Operations, 144–147.
New Kearny Generating Station—Public Service Electric and Gas Company, 564–565.
New Welding Process Cuts Cost and Welding Times, 1187–1188.
Refuse Collection Bodies, 1185–1186.
Slag-Gas Shielded Welding, 680.
The *Nautilus*, 1091–1093.
Tunnel Shield Welded, 568–569.
Welder Uses New Principle, 1093–1095.
Westinghouse Opens Alabama Electrode Plant, 987–988.
Education—Post High School Technical—Joseph Steinberg, 643–647.
Electrodes—Austenitic Manganese Steel Welding—Howard S. Avery and Henry J. Chapin, 459–479.
Electrodes—Power and Their Application—Jerry Hinkel, 847–854.
Electrodes—Stainless Steel Welding Rods and Bare, 433–437.
Electronic Components—Silver and Gold Brazing of—A. W. Swift and R. J. Metzler, 119–123.

Embrittlement of Powder Metals—Arc Welded—Albert Sill, Jr., and C. C. Mathias, 842–846.

Fillet Welds—Tolerance and Control on—John Mikulak and Merle Dillman, 449–458.
Flash Welding High-Strength Alloy Steels, W. G. Fassnacht, 937–944.
Flash Welding Aluminum to Copper Tubing—W. F. Haessly, 1162–1170.
Fluxes for Automatic Welding and Hard Surfacing—L. K. Stringham, 132–136.
Furniture—Braze-Welded Beautifies the Home—E. J. Chester, 986.

Generators—Packaging Welding—A. F. Fino, 660-662.

Hard Facing Deposits—The Effect of Welding Variables on—A. Zvanut and V. Peters, 778–782.
Hard Facing-Improved Semiautomatic Welding—H. L. Avery, Turner G. Brashear, H. J. Chapin, and G. H. Edmonds, 1073–1079.
Hard Surfacing Fluxes—L. K. Stringham, 132–136.
Heat Exchangers—Welding Procedure for Welding Tubes in—W. E. Battles, 739–742.

Inert Arc Characteristics for Consumable-Electrode Gas-Shielded Welding—R. W. Tuthill, 128–132.
Inert-Arc Field Welding of Pressure Piping—R. T. Pursell, 41–46.
Inert-Gas Arc Welding—Carbon-Steel Electrodes—Harry C. Cook and Gilbert R. Rothschild, 361–371.
Inert-Gas-Shielded Arc Welding—Effect of Power Supply Characteristics—W. H. Helmbrecht and R. L. Hackman, 531–536.
Inert-Gas-Shielded Arc Welding—Process Adjustment in—Eugene B. LaVelle, 553–560.
Inert-Gas-Shielded Metal Arc Welding of Carbon Steel—J. R. Craig, 1080–1086.
Inert-Gas-Shielded Metal-Arc Welding of Low-Carbon Steels—G. C. Christopher and R. C. Becker, 7–22.
Inert-Gas-Shielded Titanium Brazing—Harlan L. Meredith, 537–542.
Inert-Gas Welding—Current Rectification and High Frequency Interference in—J. G. Murray, 561–563.
Inert Metal Arc Welding of Carbon Steel—New Developments in—T. McElrath and R. T. Telford, 201–207.
Inert-Shielded-Arc Welding—Some Practical Considerations in the Application of Tungsten Arc Welding—H. A. Huff, Jr., 868–874.
Inspection Techniques for Quality Welding—Discussion by Robert Chuse, 126–127.
Inspection Techniques for Quality Welding—Discussion by R. J. Kriz, 126.
Inspection Techniques for Quality Welding—Discussion by Herbert R. Isenburger, 124–125.
Inspection Techniques for Quality Welding—Discussion by Jay Bland, 323, 355.

Jet Engine Manufacturing—Resistance Welding—F. J. Wallace, 762–767.

Low-Alloy High-Strength Steels in Welded Structures—Howard L. Miller and Arthur E. Wilkoff, 339–350.

Maintenance Welding in the Petroleum Industry—Don H. Rasmussen, 213–222.
Manganese Steel Welding Electrodes—Howard S. Avery and Henry J. Chapin, 459–479.
Manganese Steel Welding Electrodes—Austenitic—Discussion by J. A. Trainor and Robert Bramley, 944.
Metal-Arc Cutting and Grooving—Helmut Thielsch and Joseph Quaas, 438–446.
Metallurgical Principles of Metal Bonding—M. S. Burton, 1051–1057.
Motion Picture Photography—High Speed—Applied to Resistance Welding—I. S. Goodman, 548–552.
Multiple Electrode Welding by "Unionmelt" Process—D. E. Knight, 303–312.

Nickel Alloy 90/10—G. R. Pease and T. E. Kihlgren, 329–338.
Nondestructive Testing of Structures—Lloyd J. Oye, 223–233.

Penstocks—Fabrication and Welding of Steel—Robert F. Scott, 663–669.
Petroleum Industry—Maintenance Welding in—Don H. Rasmussen, 213–222.
Pipe, Carbide Segregation in—Discussion by A. B. Wilder, 312.
Pipe, The Production of Welded Stainless Steel—A. Grodner, 1171–1174.
Pipe Welding—Consumable Insert Method of Root Pass Welding—Theodore A. Risch and Alfred E. Dohna, 670–679.
Piping—Inert-Arc Field Welding of —R. T. Pursell, 41–46.
Powder Electrodes and Their Application—Jerry Hinkel, 847–854.
Powder Metals—Embrittlement by Arc Welding—Albert Sill, Jr., and C. C. Mathias, 842–846.
Practical Welder and Designer
Air-Conditioning Units—Speeding Up, 245.
Aircraft Range Extenders, 1097–1099.
Aluminum Alloy Gets Pressure Vessel Code Approval, 375.
Aluminum Sheet Welding—F. C. Geibig, 784–788.
Auto Shop—Rebuilding and Repairing in the—L. B. Richman, 52–54.
Automotive—Welded Bumpers, Profitable Item, 51.
Automotive Repairs—J. A. Fluharty, 1189–1192.

Bellows—Metal, 379.
Braze-Welding Clinic—R. L. Fuller, 155–156.
Braze Welds Join Cast-Iron Conduit—P. B. Foster, 875-877.

Cast-Iron Conduit—Braze Welded—P. B. Foster, 875–877.
Castings Repaired by Braze Welding—B. H. Higgs, 992–993.
Concave Tank Ends are Easy Insulating Jobs with Welded Anchors, 152–153.

Diesel Engine Valves Reclaimed by Sprayweld Process—L. V. LaRou, 480–481.

Electrodes—Powdered Iron—L. K. Stringham, 788–789.

Farm Shop—Rebuilding and Repairing in the—L. C. Richmann, 239–241.
Fixture Speeds Diesel Piston and Valve Reclamation, 374–375.
Flash Welding Jet Rings—879-881.
Flash Welding Tubing to Forgings, 482.

Heliarc and Sigma Welding Team Up, 783.
Heliarc Welded Steam-Tight Pocket, 373.
Heliarc Welding Puts the Freeze on Cost, 874.
Home Decorators—Joseph Burval, 877–878.
Hydraulic Press Repaired—Braze Welding, 1193.

Inert-Gas-Shielded Arc Welding—Faster Fusion—J. R. Fullerton, 47–51.
Inert-Gas-Shielded Arc Welding of Color TV Picture Tubes—H. A. Huff, Jr., 881–882.

Jet Rings, 879–881.

Kelcaloy Transition Sections, 481.

Low-Temperature Welding Alloys Speed and Simplify Structural Model Fabrication—Sidney Shore and Edward W. Rothfuss, Jr., 376–379.

Magnesium Shell Racks—A Lightweight Job for Heliarc Welding, 681.
Maintenance Welding in the Farm Shop—L. C. Richmann, 239–241.
Maintenance Welding—Rebuilding and Repairing in the Auto Shop—L. B. Richman, 52–54.
Metal Spray Process—Reclamation of Diesel Engine Valves—L. V. LaRou, 480–481.
Metallizing Shafts, 54.

Pipe Fittings—New Way to Jacket, 245.
Pipe, Heavy Wall, Welded Direct to Thin Wall Pipe, 577–578.
Pipe Welding, 882.
Powdered Iron Invades Electrode Design—L. K. Stringham, 788–789.
Pressure Vessel—Spun Steel Heads Form World's Largest Clamshell, 991.
Production Fusion Welding—J. R. Fullerton, 47–51.

Radar Screens—Tubular Elements Simplify Fabrication of, 149–152.
Railroad—"A" Frame Gets an A in Welding Problem, 153–154.
Repairing Cracked Milling Cutters, 989–990.

Salvaging of a Water Stand Tank, 372–373.
Semiautomatic Welder—Adaptation to Magnetic Flux—R. A. Hand, 573–574.
Shaft Repaired in Half the Time at Half the Cost, 54.
Sheaves—Welding Giant, 576–577.
Spot-Welding Method Reapplies Stainless Steel Car Sidings, 575–576.
Stainless Steel Car Sidings—Spot Welded, 575–576.
Structural—How Strong Is the Test Frame, 1099–1100.
Structural—Skyscraper, 994.
Stud Welding's "Biggest" Job—2500 MPH Wind Tunnel, 571–572.
Stud Welding Speeds Up Air-Conditioning Units, 245.

Tank—Salvaging of a Water Stand, 372–373.
Television Stand—How to Build—Guthrie B. Stone, 574.
Tower—Welded and Bolted Design Is Feature of Record Size TV, 990.
Trailers—Fast Welding on Floors for Army Cargo—Herbert Chase, 242–244.
Tubular Elements Simplify Fabrication and Lower Costs of Radar Screens, 149–152.
Tubular Furniture, 1192–1193.
Wind Tunnel, 2500 MPH, Provides Stud Welding's "Biggest" Job, 571–572.

Pressure Vessels—Fabrication of a Zirconium-Lined Reaction Vessel—O. G. Paasche and A. J. Killin, 115–118.
Production Applications of Resistance Welding—C. D. Shultheis, 768–777.

Railroad Car Building on the T&P—Hugh D. Hollis, 957–962.
Reclamation in Tool and Die Welding—Robert Groman, 543–548.
Refinery—Welding Shop Facilities—Ray M. Kolb and Russell C. Wheeler, 108–114.
Repairing Castings from Coast to Coast—W. H. Lane, 1179–1184.
Resistance Welding—High Production Applications of—C. D. Shultheis, 768–777.
Resistance Welding—High Speed Motion Picture Photography Applied to—I. S. Goodman, 548–552.
Resistance Welding in Jet Engine Manufacturing—F. J. Wallace, 762–767.

Ship Construction—Tell-Tale Damage Reveals Significance of Welded—T. D. Berry and LaMotte Grover, 234–236.
Shipbuilding—1953 Adams Lecture—Aspects of Welding Research in British Merchant—R. B. Shepheard, 23–40.
Sigma Welding of Carbon Steel—T. McElrath and R. T. Telford, 201–207.
Sigma Welding—Effect of Power Supply Characteristics on—W. H. Helmbrecht and R. L. Hackman, 531–536.
Silver and Gold for Brazing Electronic Components—A. W. Swift and R. J. Metzler, 119–123.
Silver Brazing Alloys for Corrosion-Resistant Joints in Stainless Steels—George H. Sistare, John J. Halbig and L. H. Grenell, 137–143.
Silver Brazing of Refractory Metals—C. H. Chatfield, 864–867.
Soldering—Metallurgical Principles of—M. S. Burton, 1051–1057.
Spot Welding Aluminum Alloys with Single-Phase Equipment—J. F. Harris, 1058–1072.
Spot Welder—Balancing Ignitrons in Frequency Converter Three-Phase—G. C. Woodmancy, 236–238.
Spot Welding Aluminum Alloys with Single-Phase Equipment—J. W. Kehoe and D. R. McCutcheon, 966–986.
Spot Welding Thin Aluminum—I. W. Johnson, 759–762.
Spot Welding of Titanium and Its Alloys—A. J. Rosenberg, 324–328.
Stainless Steel Pipe, Production Welded—A. Grodner, 1171–1174.
Stainless Steel Welding Rods and Bare Electrodes—AWS Specification, 433–437.
Stainless Steels—Silver Brazing Alloys for Corrosion-Resistant Joints—George H. Sistare, John H. Halbig and L. H. Grenell, 137–143.
Standards—Government—S. P. Kaidanovsky, 446–448.
Structural—Recent Applications of Welded Design to Industrial Building Framings—A. Amirikian and E. G. Odley, 103–107.
Structural—Welded TV Tower—R. A. Vaughn, 1175–1178.
Structural Welding for Bridges—Stewart Mitchell and Arthur L. Elliott, 633–642.
Structures—Application of Alloy High-Strength Steels—Howard L. Miller and Arthur E. Wilkoff, 339–350.
Structures—Automatic Horizontal and Vertical Welding of Field Erected—Amel R. Meyer, 651–659.
Structures—Concepts in Spot X-Ray—Harold Hovland, 962–965.
Structures—Nondestructive Testing of—Lloyd J. Oye, 223–233.
Submerged Arc Multiple Electrode Welding—D. E. Knight, 303–312.
Submerged Arc Welding Manually Guided—R. A. Kubli, 835–841.
Submerged Arc Welding of Chromium-Bearing Steels—Clarence E. Jackson and Arthur E. Shrubsall, 752–758.
Submerged Twinarc Welding—Theodore Ashton, 350–355.

Tank Welding—Automatic Horizontal and Vertical Welding of Field Erected Structures—Amel R. Meyer, 651–659.
Teaching Welding Design—J. P. Vidosic, 208–212.
Technical Education—Post High-School, A New Trend—Joseph Steinberg, 643–647.
Titanium and Titanium Alloys, High-Temperature Alloy Fusion Brazing for—R. A. Long and R. R. Ruppender, 1087–1090.
Titanium Brazing—Inert-Gas-Shielded—Harlan L. Meredith, 537–542.
Titanium—Spot Welding of—A. J. Rosenberg, 324–328.
Tool and Die Welding—Results in—Robert Groman, 543–548.
Training—Development of Plant Welding Programs—Morris D. Thomas, 855–859.
Tubes in Heat Exchangers—Welding Procedure for—W. E. Battles, 739–742.
Twinarc Submerged Arc Welding—Theodore Ashton, 350–355.

Welders—D-C—Rectifiers or Motor Generator Sets?—S. Oestreicher, 356–360.
Welding Shop Facilities at the Whiting Refinery—Ray M. Kolb and Russell C. Wheeler, 108–114.

X-Ray—Spot Checking of Welded Structures—Harold Hovland, 962–965.

Zirconium-Lined Reaction Vessel—Fabrication of—O. G. Paasche and A. J. Killin, 115–118.

(b) WELDING RESEARCH SUPPLEMENT

Subject Index

Air-Carbon Arc Cutting Process—A. R. Hard, 261-s to 264-s.
Aluminum Alloy Plates, Fatigue Strength Butt Joints in ⅜-In. Thick—E. C. Hartmann, Marshall Holt and I. D. Eaton, 21-s to 30-s.
Aluminum Alloy Pressure Vessels, Destruction Tests and Design Data for Welded—John B. Custer, 65-s to 70-s.
Aluminum Multiple Spots, Fatigue Resistance of—Georges Welter and André Choquet, 91-s to 98-s.
Aluminum Soldering—J. D. Dowd, 113-s to 120-s.
Anisotropy—Hot-Worked Pressure Vessel Steels—A. R. Troiano and L. J. Klingler, 209-s to 217-s.
Arc Cutting Air-Carbon Process—A. R. Hard, 261-s to 264-s.
Arc, Research of Welding—M. Ozawa and T. Morita, 280-s to 284-s.

Boilers and Pressure Vessels, Stresses for, Up to 650° F—W. P. Kerkhof, 239-s to 251-s.
Brazed Joints, Investigation of Factors Determining the Tensile Strength of—Nikolajs Bredzs, 545-s to 563-s.
Brittle Fracture—Crack Propagation—Frederick Forscher, 579-s to 584-s.
Brittle Fracture—Crack-Starter Tests of Ship Fracture and Project Steels—P. P. Puzak, M. E. Schuster and W. S. Pellini, 481-s to 495-s.
Brittle Fracture in Structural Steels, Initiation and Propagation of; Discussion—G. M. Boyd, 30-s; Discussion—B. Persson, 166-s; Authors' Reply, 167-s.
Brittle Fracture—Performance of Weldments and Prime Plate of ABS-B Steel—W. S. Pellini and E. W. Eschbacher, 524-s to 531-s.
Brittle Fracture—Root Conditions in a V-Notch Charpy Impact Specimen—H. A. Lequear and J. D. Lubahn, 585-s to 588-s.
Brittle Fracture Studies, Report on—F. J. Feely, Jr., D. Hrtko, S. R. Kleppe and M. S. Northup, 99-s to 109-s; Discussion—M. Gensamer, 109-s to 111-s.
Brittle Strength and Transition Temperature of Structural Steel; Discussion—R. W. Vanderbeck and W. T. Lankford, 129-s to 130-s; Discussion—R. A. Hechtman, 130-s; Discussion—A. B. Bagsar, 131-s; Discussion—D. Rosenthal, 131-s to 132-s; Discussion—R. Raring, 132-s to 133-s; Authors' Reply, 133-s.
Brittleness Tests—208-s.
Buckling of Intermittently Welded Structural Members—C. H. Norris and J. B. Scalzi, 564-s to 578-s.

Carbon Arc Air Cutting Process—A. R. Hard, 261-s to 264-s.
Charpy Test Data, Applicability of—P. P. Puzak, M. E. Schuster and W. S. Pellini, 433-s to 441-s.
Charpy V-Notch, Root Conditions in a—H. A. Lequear and J. D. Lubahn, 585-s to 588-s.
Cor-Ten and Mild Steel, Fatigue Tests of Spot Welds in—Georges Welter and André Choquet, 134-s to 140-s.
Cr-Mo Steels, Transformation of, During Welding—W. R. Apblett, Jr., R. P. Dunphy and W. S. Pellini, 57-s to 64-s.
Crack Propagation—Frederick Forscher, 579-s to 584-s.
Crack-Starter Tests of Ship Fracture and Project Steels—P. P. Puzak, M. E. Schuster and W. S. Pellini, 481-s to 495-s.
Cutting, Air-Carbon Arc, Process—A. R. Hard, 261-s to 264-s.

Design Data for Welded Aluminum Pressure Vessels—John B Custer, 65-s to 70-s.
Design, Fatigue as a Factor in Pressure Vessel—T. J. Dolan, 265-s to 275-s.
Design, Fatigue Factor in Welded—A. Erker, 295-s to 304-s.
Directionality of Mechanical Properties in Hot-Worked Steels—A. R. Troiano and L. J. Klingler, 209-s to 217-s.

Electrode Standard—Czechoslovakian—198-s.
Electrodes, Moisture in Low-Hydrogen Welding—C. DeRop and H. Schmidt-Bach, 39-s.
Electrodes—Penetration Factors in Metallic Arc Welding—Roger C. Waugh and Otto P. Eberlein, 285-s to 288-s.

Fatigue as a Factor in Pressure Vessel Design—T. J. Dolan, 265-s to 275-s.
Fatigue—Designing and Making Welded Structural Steel Members for Cyclic Loading—Committee Report—386-s to 387-s.
Fatigue—Effect of Thermal Activation on Fatigue Life of Butt Welds—A. M. Freudenthal and R. A. Heller, 327-s to 338-s.
Fatigue Factor in Welded Design—A. Erker, 295-s to 304-s.
Fatigue (Plastic) Strength of Pressure Vessel Steels—J. H. Gross, D. E. Gucer and R. D. Stout, 31-s to 39-s.
Fatigue Resistance of Aluminum Multiple Spot Welds—Georges Welter and André Choquet, 91-s to 98-s.
Fatigue Strength Butt Joints in ⅜-in. Thick Aluminum Alloy Plates—E. C. Hartmann, Marshall Holt and I. D. Eaton, 21-s to 30-s.
Fatigue Strength of Butt Welds Made with Different Electrodes—G. Becker and R. Rieger, 284-s.
Fatigue Strength of Spot-Welded Stainless Steels, Effects of Prestressing on—André Choquet, V. N. Krivobok and Georges Welter, 509-s to 523-s.
Fatigue Strength of Welds Made with Low-Hydrogen Electrodes—128-s.
Fatigue Tests of Pressure Vessels—E. D. Narduzzi and Georges Welter, 230-s to 238-s.
Fatigue Tests of Spot Welds in Cor-Ten and Mild Steel—Georges Welter and André Choquet, 134-s to 140-s.
Fatigue Tests of Steel Specimens Prepared for Metallizing—R. C. Miller, Jr., and A. W. Brunot—275-s to 279-s.
Fatigue Tests of Welded Beam Connections—Otto Graf, 365-s to 368-s.
Field-Weld Test for Mild Steel Welds at Low Temperatures—John R. Watt and James J. Smetana, 79-s to 82-s.
Flash Welds—Study of Cooling Rates in Steel—E. F. Nippes, Warren F. Savage, Gordon Grotke and S. M. Robelotto, 339-s to 362-s.
Fracture Strength, Critical Energy Rate Analysis of—G. R. Irwin and J. A. Kies, 193-s to 198-s.

Graphitization in Steel—Nucleation and Growth—Floyd Brown, 257-s to 261-s.

Health Hazard—Working Conditions Ambient to Inert-Gas-Shielded Metal-Arc Welding—Leslie Silverman and Harry Gilbert, 218-s to 229-s.
Heavy Sections, The Welding of—W. Spraragen and M. A. Cordovi, 369-s to 386-s.

High-Strength Steels for Pressure Vessels, Literature Survey of—251-s to 256-s.
High-Strength Steels, Literature Survey on—480-s.
High-Temperature Properties of Weld Metal—J. Heuschkel, 388-s to 397-s.
High-Temperature Steam, Evaluation of Superheater Materials for—Bela Ronay and W. E. Clautice, 199-s to 206-s.
Hot Cracking, Factors Which Influence Weld—W. R. Apblett and W. S. Pellini, 83-s to 90-s.
Hot Cracks in Weld Metal—K. Kautz, 64-s.

Inconel X, Optimum Spot and Seam Welding Conditions for—Ernest F. Nippes and Herbert B. Fishman, 1-s to 14-s.
Inert-Gas-Shielded Metal-Arc Welding, Working Conditions Ambient to—Leslie Silverman and Harry Gilbert, 218-s to 229-s.
Interpretive Reports—441-s.

Literature Review—The Welding of Heavy Sections—W. Spraragen and M. A. Cordovi, 369-s to 386-s.
Literature Survey of High-Strength Steels—251-s to 256-s.
Low-Hydrogen Electrodes, Fatigue Strength of Welds Made with—128-s.
Low-Hydrogen Welding Electrodes, Moisture in—C. DeRop and H. Schmidt-Bach, 39-s.
Low-Temperature Properties of Weld Metal—J. Heuschkel, 388-s to 397-s.
Low-Temperature Stress-Relieving Effects on Stress-Corrosion Cracking—C. R. McKinsey, 161-s to 166-s.
Low-Temperature Stress Relieving of Pressure Vessels—Hans Kunz, 288-s to 294-s.

Metallizing, Fatigue Tests of Steel Specimens Prepared for—R. C. Miller, Jr., and A. W. Brunot, 275-s to 279-s.
Molybdenum, Effect of Oxygen on Welding and Brazing—Timothy Perry, H. S. Spacil and John Wulff, 442-s to 448-s.
Molybdenum, Joining of—James H. Johnston, Harry Udin and John Wulff, 449-s to 458-s.

Nodular Cast Iron, Welding Metallurgy of; Discussion—T. E. Kihlgren, 217-s, 229-s; Authors' Reply, 229-s.
Nondestructive Test Methods for Inspection of Welded Joints—R. J. Krieger, S. A. Wenk and R. C. McMaster, 154-s to 160-s.
Notch-Bend Specimens, Evaluation of—P. P. Puzak and W. S. Pellini, 187-s to 192-s.
Notch Toughness Variation as Affected by Electrode Type—William J. Murphy and R. D. Stout, 305-s to 310-s.

Oxy-acetylene Stress Relieving of Pressure Vessels—Hans Kunz, 288-s to 294-s.

Peening, An Investigation of; Discussion—Louis J. Larson, 76-s to 77-s; Authors' Reply, 77-s to 78-s.
Peening, Effects of, Last Pass of Welds—W. S. Pellini and E. W. Eschbacher, 71-s to 76-s.
Peening Investigations—206-s to 208-s.
Penetration Factors in Metallic Arc Welding—Roger C. Waugh and Otto P. Eberlein, 285-s to 288-s.
Physics of the Welding Arc—M. Ozawa and T. Morita, 280-s to 284-s.
Portal Frames Tested to Collapse—J. M. Ruzek, K. E. Knudsen, E. R. Johnston and L. S. Beedle, 469-s to 480-s.
Pressure Vessel Design, Fatigue as a Factor in—T. J. Dolan, 265-s to 275-s.
Pressure Vessel Research in the Universities—Perry R. Cassidy, 70-s, 78-s.
Pressure Vessel Steels—Directionality of Mechanical Properties in Hot-Worked Steels—A. R. Troiano and L. J. Klingler, 209-s to 217-s.
Pressure Vessel Steels, The Plastic Fatigue Strength of—J. H. Gross, D. E. Gucer and R. D. Stout, 31-s to 39-s.
Pressure Vessel Stresses from Radial Loads in Cylindrical—P. P. Bijlaard, 615-s to 623-s.
Pressure Vessels and Boilers, Stresses for, Up to 650° F—W. P. Kerkhof, 239-s to 251-s.
Pressure Vessels, Destruction Tests and Design Data for Welded Aluminum—John B. Custer, 65-s to 70-s.
Pressure Vessels—Literature Survey of High-Strength Steels—251-s to 256-s.
Pressure Vessels, Oxy-acetylene Stress Relieving of—Hans Kunz, 288-s to 294-s.
Pressure Vessels Subjected to Static and Dynamic Loads—E. D. Narduzzi and Georges Welter, 230-s to 238-s.
Pressure Vessels—30-Ft Diameter All-Welded Test Tank—John Vasta and Frank W. Dunham, 422-s to 432-s.

Research, Welding, in the European Universities—A. Portevin, 98-s, 111-s to 112-s.
Residual Stress and the Compressive Strength of Steel—A. W. Huber and L. S. Beedle, 589-s to 614-s.
Resistance Welding—Study of the Cooling Rates in Flash Welds in Steel—E. F. Nippes, Warren F. Savage, Gordon Grotke and S. M. Robelotto, 339-s to 362-s.
Rigid Connections for Portal Frames, An Investigation of—A. A. Toprac, 40-s to 56-s; Discussion—Alfred E. Pearson, 56-s.
Rigid Frame Structures Tested to Collapse—J. M. Ruzek, K. E. Knudsen, E. R. Johnston and L. S. Beedle, 469-s to 480-s.

Safety—Working Conditions Ambient to Inert-Gas-Shielded Metal-Arc Welding—Leslie Silverman and Harry Gilbert, 218-s to 229-s.
Seam and Spot Welding, Optimum, Conditions for Inconel X—Ernest F. Nippes and Herbert B. Fishman, 1-s to 14-s.
Seam Welding, Foil—F. Busse, 614-s, 624-s.
Ship Fracture and Project Steels, Crack-Starter Tests of—P. P. Puzak, M. E. Schuster and W. S. Pellini, 481-s to 495-s.
Ship Plate Performance of Weldments and Prime Plate of ABS-B Steel—W. S. Pellini and E. W. Eschbacher, 524-s to 531-s.
Ship Welding Reports, Admiralty—623-s to 624-s.
Soldering of Aluminum—J. D. Dowd, 113-s to 120-s.
Spot and Seam Welding, Optimum, Conditions for Inconel X—Ernest F. Nippes and Herbert B. Fishman, 1-s to 14-s.
Spot-Welded Stainless Steels, Effects of Prestressing on Fatigue Strength of—André Choquet, V. N. Krivobok and Georges Welter, 509-s to 523-s.
Spot Welding of Titanium—E. R. Funk, 397-s to 400-s.
Spot Welding, Series, of 0.036-In. Auto Body Steel—Ernest F. Nippes and Frederick H. Domina, 535-s to 544-s.
Spot Welds—Fatigue Strength in Cor-Ten and Mild Steel—Georges Welter and André Choquet, 134-s to 140-s.
Spot Welds, Stress Distribution and Fatigue Resistance of Alclad 24ST Multiple—Georges Welter and André Choquet, 91-s to 98-s.
Spot Welds, The Significance of the Tension Test for—E. R. Funk, 363-s to 365-s.
Stainless Steel Weld Deposits, Determination of Ferrite in Type 347—Walter L. Fleischmann, 459-s to 468-s.
Stainless Steels, Effects of Prestressing on Fatigue Strength of Spot-Welded—André Choquet, V. N. Krivobok and Georges Welter, 509-s to 523-s.
Stainless Steels, Metallurgical Aspects of Welding Precipitation-Hardening—C. W. Funk and M. J. Granger, 496-s to 508-s.
Stress-Corrosion Cracking, Effects of Low-Temperature Stress-Relieving on—C. R. McKinsey, 161-s to 166-s.
Stress-Relieving Low-Temperature Effects on Stress-Corrosion Cracking—C. R. McKinsey, 161-s to 166-s.
Stress Relieving of Pressure Vessels, Oxy-acetylene Method of—Hans Kunz, 288-s to 294-s.
Stresses for Pressure Vessels and Boilers Up to 650° F—W. P. Kerkhof, 239-s to 251-s.
Stresses, Relief of Internal, at 400–575° F—208-s.
Structural—An Investigation of Welded Rigid Connections for Portal Frames—A. A. Toprac, 40-s to 56-s; Discussion—Alfred E. Pearson, 56-s.
Structural—Buckling Tests on Welded Plate Girders with Stiffeners—C. Massonnet, 120-s.
Structural Design, An Evaluation of Plastic Analysis as Applied to; Discussion—Nicholas J. Hoff, 14-s to 15-s.
Structural—Fatigue Tests of Welded Beam Connections—Otto Graf, 365-s to 368-s.
Structural Members, Local Buckling of Intermittently Welded—C. H. Norris and J. B. Scalzi, 564-s to 578-s.
Structural—Residual Stress and the Compressive Strength of Steel—A. W. Huber and L. S. Beedle, 589-s to 614-s.
Structural—Welded Portal Frames Tested to Collapse—J. M. Ruzek, K. E. Knudsen, E. R. Johnston and L. S. Beedle, 469-s to 480-s.

Tank Failures—Report on Brittle Fracture Studies—F. J. Feely, Jr., D. Hrtko, S. R. Kleppe and M. S. Northup, 99-s to 109-s; Discussion—M. Gensamer, 109-s to 111-s.
Tank, 30-Ft Diameter All-Welded Test—John Vasta and Frank W. Dunham, 422-s to 432-s.
Titanium—Alloy Welds Deposited in "Unalloyed' Titanium Base Metal—C. E. Harthower and Daniel M. Daley, Jr., Part I, 311-s to 326-s; Part II, 401-s to 414-s.
Titanium Alloys, Effects of Oxygen and Nitrogen in Welding—James H. Johnston, 414-s to 416-s.
Titanium, Effect of Atmospheric Contaminants on Arc Welds in—J. C. Barrett and I. R. Lane, Jr., 121-s to 128-s.
Titanium, Fusion Welding of Commercially Pure—Francis H. Stevenson, 147-s to 153-s.
Titanium-Manganese Sheet Alloy RC-130A, Weldments in—H. M. Meyer, 417-s to 421-s.
Titanium Sheet, Effects of Alloying Elements on the Weldability of—H. M. Meyer and W. Rostoker, 173-s to 186-s.
Titanium, Spot Welding of—E. R. Funk, 397-s to 400-s.
Transition, Ductility, of Weld Metal—W. S. Pellini and E. W. Eschbacher, 16-s to 20-s.
Transition Temperature and Brittle Strength of Structural Steel; Discussion—R. W. Vanderbeck and W. T. Lankford, 129-s

to 130-s; Discussion—R. A. Hechtman, 130-s; Discussion—A. B. Bagsar, 131-s; Discussion—D. Rosenthal, 131-s to 132-s; Discussion—R. Raring, 132-s to 133-s; Authors' Reply, 133-s.
Transition Temperature—Critical Energy Rate Analysis of Fracture Strength—G. R. Irwin and J. A. Kies, 193-s to 198-s.
Transition Temperature—Effect of Electrode Type in the Notch Slow-Bend Test—William J. Murphy and R. D. Stout, 305-s to 310-s.
Transition Temperature—Effect of Reinforcement on Performance of Weldments—Carl E. Hartbower, 141-s to 146-s.
Transition Temperature—Evaluation of Notch-Bend Specimens—P. P. Puzak and W. S. Pellini, 187-s to 192-s.
Transition Temperature—Field-Weld Test for Mild Steel Welds at Low Temperatures—John R. Watt and James J. Smetana, 79-s to 82-s.
Transition Temperatures—Report on Brittle Fracture Studies—F. J. Feely, Jr., D. Hrtko, S. R. Kleppe and M. S. Northup, 99-s to 109-s; Discussion—M. Gensamer, 109-s to 111-s.

Underwater Metallic Arc Welding—Roger C. Waugh and Otto P. Eberlein, 531-s to 534-s.

Weldability—Applicability of Charpy Test Data—P. P. Puzak, M. E. Schuster and W. S. Pellini, 433-s to 441-s.
Weldability—Army First Pass Groove Weld Creek Susceptibility Test—Z. J. Fabrykowski, S. Goodman, and B. A. Schevo, 168-s to 172-s.
Weldability—Crack Propagation—Frederick Forscher, 579-s to 584-s.
Weldability—Crack-Starter Tests of Ship Fracture and Project Steels—P. P. Puzak, M. E. Schuster and W. S. Pellini, 481-s to 495-s.
Weldability—Effect of Electrode Type in the Notch Slow-Bend Test—William J. Murphy and R. D. Stout, 305-s to 310-s.
Weldability—Effect of Reinforcement on Performance of Weldments—Carl E. Hartbower, 141-s to 146-s.
Weldability—Effects of Temperature on Weld Metal Properties—J. Heuschkel, 388-s to 397-s.
Weldability—Factors Which Influence Weld Hot Cracking—W. R. Apblett and W. S. Pellini, 83-s to 90-s.
Weldability—Performance of Weldments and Prime Plate of ABS-B Steel—W. S. Pellini and E. W. Eschbacher, 524-s to 531-s.

Yield Strength of Weld Metals at Elevated Temperature—G. E. Claussen, 544-s.
